PROFILE

Senior full-stack engineer with 10+ years across software development, cloud and platform operations, IT systems, data and automation. I take products from an empty repository to production — architecture, backend, frontend, mobile, payments and infrastructure — and build the AI-assisted automation around them. Hands-on with PHP/Laravel, React/TypeScript, Node.js, Python, PostgreSQL, AWS, Azure, Cloudflare, Docker and Terraform, with a habit of written decisions, automated tests and staged, reversible releases. Bilingual English/Spanish, used to remote work with international teams.

- 8 systems documented as full case studies — architecture, workflows, data model — with 1,500+ automated tests
- 14 client websites live today in healthcare, hospitality, recruitment, finance, education and non-profit
- Wompi, PayU and ePayco payments behind one pattern: signed webhooks, idempotency and an append-only ledger
- AI-assisted bots and workflow automation in production on Slack, AWS and Cloudflare

EXPERIENCE

Founder & Lead Engineer · GWork Systems

2026 - Present

Medellín · Remote — Own practice — software, AI automation, cloud & security

- Design and build production platforms end to end: a direct-booking hospitality platform (Sedona Scapes), a real-time sports marketplace with an Android app (Cancha), a marketplace rebuild (All Bookings 2.0) and a B2B lead-intelligence engine.
- Integrated Wompi, PayU and ePayco behind provider-neutral adapters — hosted checkout, signed and deduplicated webhooks, append-only ledger and reconciliation; no card data touches the platforms.
- Made double-bookings and oversold matches impossible at the database level (PostgreSQL EXCLUDE constraints, unique indexes, advisory locks) and backed each system with DB, integration and end-to-end test suites.
- Run an AI-augmented delivery process: architecture decision records first, coding agents inside automated gates (types, lint, unit, DB, E2E, accessibility, CSP), human review and staged releases.

Next.js · TypeScript · Hono · Cloudflare Workers · PostgreSQL / PostGIS · Expo / React Native · Python · Laravel

IT Manager — IT & Internal Systems · indie.io

Jun 2026 - Sep 2026

Remote

- Owned internal systems and platform operations across AWS and Cloudflare: internal applications, access, DNS, Workers, infrastructure-as-code and day-to-day technical operations.
- Built AI-assisted bots and operational automations for Hive/Slack workflows, integrating LLM/API services, PostgreSQL-backed tools and serverless components for intake, task routing and access lifecycle.
- Led staged platform migrations and integrations — including community/Discord workflows and internal tooling — across sandbox, staging and production with Terraform, Docker, GitHub CI/CD, E2E validation, approval gates, audit evidence and rollback plans.

AWS · Cloudflare · Terraform · Docker · PostgreSQL · Slack · LLM APIs · GitHub Actions

Technical Writer & Developer · Fiserv

Jan 2026 - Jun 2026

Remote

- Supported the Vision Next platform with developer-facing technical and API documentation for financial-system workflows.

SKILLS

FULL-STACK

PHP / Laravel / Symfony · React / Next.js · TypeScript · Node.js / Hono · Python / FastAPI · React Native / Expo · REST APIs · WordPress

CLOUD & PLATFORM

AWS · Azure · Cloudflare Workers / Pages / R2 · Docker · Terraform · GitHub Actions / CI/CD

DATA

PostgreSQL / PostGIS · MySQL · MongoDB · SQL Server · Azure Data Factory · Databricks

AI & AUTOMATION

LLM API integration · AI-assisted bots · Grounded assistants · Zapier / HubSpot / GoHighLevel · Scrapers & schedulers

PAYMENTS & INTEGRATIONS

Wompi · PayU · ePayco · Stripe · Webhooks & idempotency · OAuth / SSO

- Analyzed REST APIs with Swagger/OpenAPI, documenting endpoints, authentication, request/response models, status codes and error handling.
- Created reusable Markdown/API documentation templates and worked with engineering teams on architecture, integrations, runbooks and developer guidance.

REST APIs · Swagger / OpenAPI · Markdown · Docs-as-code

Provisioning Manager — IT Infrastructure & Access · Steward

Nov 2023 – Nov 2025
Remote

- Managed IT provisioning and access across Google Workspace, Okta and MDM for macOS and Windows fleets.
- Built internal React/Node.js dashboards to monitor resource allocation and supported AWS cloud infrastructure initiatives.
- Authored SOPs, trained staff and coordinated provisioning, infrastructure and access-management processes across teams.

Google Workspace · Okta · MDM · React · Node.js · AWS

Full-Stack Developer & Team Lead · Virtual Latinos

Jan 2025 – Jun 2025
Remote · concurrent project

- Led full-stack delivery with React, Redux, TypeScript, Laravel and PostgreSQL for the virtual-assistant management and recruitment platform.
- Built and optimized REST APIs and automated operations through HubSpot, Zapier and GoHighLevel — lead pipelines, follow-ups, forms and calendars — reducing manual workload by 40%.
- Ran sprint planning, code reviews and mentoring; documented APIs and processes in Confluence, Swagger and Notion.
- Turned Figma designs into responsive, WCAG-aware WordPress pages (Elementor, ACF, WooCommerce) tuned for Core Web Vitals.

React · Redux · TypeScript · Laravel · PostgreSQL · HubSpot · Zapier · WordPress

SEO Specialist & Web Developer (Contract) · U.S.-based staffing company

Jul 2024 – Oct 2024
Remote · concurrent project

- Delivered SEO-focused WordPress and HTML/CSS/JavaScript sites with schema markup, Google Analytics, Search Console and Meta Pixel conversion tracking.
- Built custom plugins for lead automation and CRM integration, and handled server administration (cPanel, Linux), performance and production support.

WordPress · JavaScript · Technical SEO · Google Analytics · Linux

IT Specialist & Developer · SouthDesk

May 2023 – Oct 2023
Remote

- Supported business IT systems and day-to-day operations: user support, systems administration and troubleshooting.
- Built and maintained the company's responsive, conversion-focused website alongside other development tasks.

IT support · Systems administration · WordPress

IT Specialist & Systems Integrator · Abatech

Jul 2021 – Apr 2023
Medellín

- Managed hybrid infrastructure across Azure and on-premises servers; automated maintenance with Python and Bash.
- Led Docker containerization and CI/CD pipeline setup, and implemented cybersecurity protocols and risk assessments.
- Built WordPress landing pages and internal portals with forms integrated to external APIs.

Azure · Docker · CI/CD · Python · Bash · Security

SYSTEMS & SECURITY

Okta · Google Workspace · MDM · RBAC / MFA · CSP / HSTS · Risk analysis

DELIVERY

Swagger / OpenAPI · Technical writing · Agile / Scrum · Code review · Mentoring · Jira / Confluence / Notion

LANGUAGES

Spanish — Native
English — Professional (C1)

EDUCATION

Technical Degree in Software Analysis and Development
CENSA · 2022

Computer Security Technician (Risk Analysis)
Fundación Carlos Slim · 2021

CERTIFICATIONS

Web Scraping with Python and XPath
Fundación Carlos Slim · 2023

Front End Developer
Fundación Carlos Slim · 2022

Cloud Computing Fundamentals
Fundación Carlos Slim · 2022

PHP Programming with MySQL Database
Politécnico Superior de Colombia · 2022

Database Administrator
Fundación Carlos Slim · 2021

Also: Glide: Apps Without Code — Data, Screens and Relationships (2024) · Web Assistant (2022) · Finder (Cybersecurity / Data Tools) (2022) · Data Curator (2022) · Web Content Developer (2021) · Computer Security Technician (2021) · IT Technician (2021) · Computer Architecture (2018) · HTML and JavaScript Programming (2018) · Web Design with Macromedia Dreamweaver MX (2018) · C++ Programming Language (2016) · Database Administration in Access (2016)

Software Analyst, Developer & UX Collaborator · **UNIFI BPO** Apr 2019 – Jul 2021
Medellín

- Built internal web applications with React, FastAPI and MySQL that improved process efficiency.
- Wrote technical requirements and Swagger API documentation, designed UI components with the design team in Figma and trained users on new features.

React · FastAPI · MySQL · Swagger · Figma

Software Developer & Consultant · **Freelance** Feb 2017 – Apr 2019
Remote

- Delivered SaaS solutions with React, Node.js, Laravel and MongoDB, integrating Stripe, Twilio and Firebase — from architecture and deployment to user manuals and training.
- Built WordPress solutions for small businesses: WooCommerce stores, multilingual corporate sites (WPML), booking systems and custom payment and booking plugins.

React · Node.js · Laravel · MongoDB · Stripe · Twilio · WordPress

IT Specialist, Full-Stack Developer & Team Lead · **Conquistadores Home, La Villa**
Feb 2014 – Jan 2017
Medellín

- Built custom booking and management systems with Laravel, Bootstrap, JavaScript and MySQL, plus the corporate website with live availability.
- Led a small technical team, set coding standards and ran secure server infrastructure with regular backups.

Laravel · MySQL · Bootstrap · JavaScript · WordPress

EARLIER EXPERIENCE (2008 – 2013)

Software Analyst & Developer, IT · **Aerolíneas de Antioquia (ADA)**
Feb 2011 – Dec 2013
Internal tools for flight scheduling, passenger management and operational reporting (PHP, C#, SQL Server).

Night Auditor — Systems Manager · **The Charlee Hotels** Jan 2010 – Jan 2011
Financial and operational systems, audit-process automation and data integrity.

IT Specialist & Front-End Developer · **Two Cousins Trucking** Feb 2008 – Jan 2010
Front-end web applications in JavaScript, IT infrastructure and security audits.

Night Auditor — Systems · **Novelty Suites S.A.** 6 years
Night-audit operations, financial systems and reporting accuracy.

SELECTED PROJECTS

Architecture, workflows and data models for each one are in the portfolio.

Sedona Scapes Platform
Direct-booking platform for a vacation-rental business — reservation engine, guest portal with e-signature, PayU payments, channel sync and an MFA back office. 723 DB + 165 E2E tests.

Cancha
Real-time football marketplace: Android app (Expo), Hono API on Cloudflare Workers, PostGIS discovery, Wompi split payments and a reliability score.

Lead Engine
Nightly lead sourcing, headless-browser enrichment and A+ to D scoring feeding an enforced CRM pipeline for a tourism company.

All Bookings 2.0
Accommodation marketplace rebuilt from no-code into a typed monorepo: multi-tenant hosts, concurrency-safe bookings, Wompi webhooks and a ledger.
